Dmitrii Krylov

On my way to new experience
Batumi, Ajaria, Georgia

Summary

Hi there! My name is Dmitry and I'm open for the new challenges. I keep growing in IT since 2007. Well, it was a wild ride, I've got pretty wide experience across different spheres (projects and absolutely different companies), including software development, system design and team leadership. AI/Platform Engineer. I build the internal platforms to turn LLMs from demos into working company infrastructure - the services, the delivery pipeline, the documentation, and the processes around them. Over the past six months I've shipped around twenty internal services to production: a RAG-based support analytics system, a proxy layer for LLM providers, a secrets management platform, an internal marketplace of AI extensions now used by engineering, QA, product, and HR. What interests me is the point where engineering meets operations - not "build a prototype," but carry it through to SSO, audit trails, migrations, CI, and documentation that maintains itself. Stack: Python (FastAPI, Celery), Go, TypeScript/React, PostgreSQL + pgvector, Redis, Kafka, Docker/Kubernetes, GitLab CI, HashiCorp Vault, Keycloak/OIDC, LLM API integrations.

Experience

Prequel Inc.

Backend lead

February 2026 - September 2026 (8 months)

Batumi

- Built a RAG-based support analytics system
- Designed and launched a secrets management platform on top of HashiCorp Vault
- Automated documentation upkeep
- Built an engineering knowledge base
- Shipped end-to-end product and internal services
- Standardized service delivery

inDrive

Engineering Manager

December 2024 - February 2026 (1 year 3 months)

Batumi, Georgia

Vidoomy

10 months

SSP Project leader

January 2024 - October 2024 (10 months)

Madrid, Community of Madrid, Spain

On my way to build a team of professionals to achieve bright results in a short period of time

Project Lead

January 2024 - October 2024 (10 months)

Instamart

Development Team Lead

March 2022 - November 2023 (1 year 9 months)

Moscow, Moscow City, Russia

I came to the company as a team lead at the moment of forming a new advertising platform. Within a year, the project was developed from scratch to a product that brings profit to the company.

* I took over control of all developers in the project (14 people: back, front, qa, later +mobile dev)

* When the first MVP was deployed, the domain was divided into 3 teams

* Organized development processes in the team, designing services and subsystems to support traditional RTB system

SberMarket

Development Team Lead

March 2022 - November 2023 (1 year 9 months)

IPChain Association

3 years 2 months

Perl team lead

February 2019 - March 2022 (3 years 2 months)

Москва, Россия

I came as a senior developer and grow up to team leader (over 30 persons in project):

- * Took over technical ownership over the project
- * Made auto tests mandatory part of development process
- * Prepared a plan to get rid of legacy parts and subsystems
- * Hired new developers, divided on 2 teams, formed third one to keep moving to microservices
- * Improved deployment process, added monitoring and alerting systems
- * Improved stability of background task processing

Development Team Lead

February 2019 - March 2022 (3 years 2 months)

IPONWEB

4 years 8 months

Senior Perl Developer/Big Data Engineer

March 2014 - October 2018 (4 years 8 months)

Москва, Россия

Started as a lua-developer and came to ETL team to grow up existing data processing system

- * Designed and coded a new testing subsystem for pre-release autotests powered by microservices

Perl Developer

March 2014 - October 2018 (4 years 8 months)

KnoRus

Senior Full Stack Developer

July 2012 - March 2014 (1 year 9 months)

Moscow, Russia

Taking over technical leadership of the publishing house's digital library, including:

- * Ordering and installing hardware servers
- * coding backend and frontend
- * setting up monitoring and alerting systems
- * designing new subsystems
- * introducing a task management system
- * controlling performance and quality of results being done by external contractors

KHOPYC

Full Stack Engineer

July 2012 - March 2014 (1 year 9 months)

Kokoc Group

Senior Python Developer (Django)

May 2011 - July 2012 (1 year 3 months)

Moscow

Support of an internal web application related to the company's core activities. While working on the project, I automated the process of updating the content for satellite sites, reduced the update time, increased the stability of the process and added control of the results. Optimized the database and queries

SoftPower Solutions llc

2 years 9 months

Senior MySQL Database Administrator

September 2008 - May 2011 (2 years 9 months)

Moscow

Supporting databases infrastructure, coding internal stored routines. Creating databases architectures from scratch, analyzing performance, optimizing schemas, storages, eliminating bottlenecks

Senior Database Administrator

September 2008 - May 2011 (2 years 9 months)

InfoTechnoProject

Junior Database Administrator

November 2007 - September 2008 (11 months)

Moscow

The very beginning of my career in IT. From here I learned the best of my knowledge in the field of relational databases, creating an architecture, designing, tuning performance, writing stored procedures, building clusters, setting up replication, etc.

ИнфоТехноПроект

Junior Database Administrator

November 2007 - September 2008 (11 months)

Education

MODERN UNIVERSITY FOR THE HUMANITIES

Bachelor's Degree, Computational Science · (2005 - 2009)
